引文與參考文獻與文獻目錄

Citation-引文(註)

The *Journal of Abnormal Psychology* was the product of a great effervescence of thought at the turn of the 20th century. Its founding editor, Morton Prince, was an energetic physician specializing in what would come to be psychiatry. The scion of Boston's political elite, Prince lived up to this legacy by founding other long-lived institutions as well, including the American Psychopathological Association and the Harvard Psychological Clinic. For the journal, he wanted its pages to include "such subjects as hysteria, hallucinations, delusions, amnesias, abulias, aphasias, fixed ideas, obsessions, deliria, perversions, emotions and their influence, exaltations, depressions, habit neuroses and psychoses, phenomena of hypnosis, sleep, dreams, automatisms, alterations of personality, multiple personality (Prince's particular specialty), dissociation of consciousness, subconscious phenomena, relation of the mind to physiological processes, neurasthenic and psychasthenic states" (Allport, 1938). The first issue, published in April 1906, would include articles on compulsive behavior, hypnosis, sudden religious conversion, and a critique of a new treatment technique introduced by an Austrian physician, Sigmund Freud (which, the author indicated, was "often less necessary than one might think" [Putnam, 1906]).

Modeling What Matters to Gray Matter

If much of what is attractive about PPF with regards to psychology is not particularly novel, what does PPF add? One valuable feature is its potential to be neurally realized, not just in the midbrain and basal ganglia, but across cortex. The suggestion, supported by neuroanatomical observations, is that the whole brain deals in predictions and prediction errors as part of a generative model of the causes of our ongoing sensorium. That model, and the cortex itself, is hierarchical such that activity in each layer tries to predict the activity in the layer projecting to it (Friston, 2005). For example, hierarchical predictive coding models of vision reflect features of visual receptive fields, like end-stopping—that some cells respond more vigorously to short than long stimuli. Rajesh Rao and Dana Ballard (Rao & Ballard, 1999) showed that a hierarchical (three-layer) model tracking predictions and prediction errors about natural image inputs evinced end-stopping, carried by "cells" (nodes in the model) that signaled prediction errors.

APA 格式

II. Methodology

In this section, we give a high-level overview of the methodology we have used for this *post-hoc* self-assessment. The process is described in detail in Section III.

A. Z-Inspection® Process

We used a process to assess trustworthy AI in practice, called Z-Inspection® [5], which expands upon the "Framework for Trustworthy AI" as defined by the High Level Experts Groups set up by the European Commission [3]. The Z-Inspection® is a holistic process based on the method of evaluating new technologies according to which ethical issues must be discussed through the elaboration of sociotechnical scenarios. The Z-Inspection® process is depicted in Fig. 1, and it is composed of three main phases: 1) the Set Up Phase; 2) the Assess Phase; and 3) the Resolve Phase. The process has been successfully applied to both assess *post-hoc* [6] and *ex-ante* [7] trustworthiness of AI systems used in healthcare.

Annotated Insert Copy

Haller, E. and T. Rebedea (2013). Designing a Chat-bot that Simulates an Historical Figure. 19th International Conference on Control Systems and Computer Science, Bucharest, ROMANIA, Ieee Computer Soc.

There are many applications that are incorporating a human appearance and intending to simulate human dialog, but in most of the cases the knowledge of the conversational bot is stored in a database created by a human experts. However, very few researches have investigated the idea of creating a chat-bot with an artificial character and personality starting from web pages or plain text about a certain person. This paper

人工智慧音樂介入芳香療法對自律神經影響之探討-以護理人員為例

何麗卿

開南大學 碩士 2023

https://hdl.handle.net/11296/ghrus5

故本研究主旨分別探討芳香療法、人工智慧音樂、人工智慧音樂介入芳香療法對自律神經之活性影響，並觀察是否人工智慧音樂介入芳香療法使用後有加乘之作用。本研究以北區某精神專科醫院的急診護理師、加護病房護理師、急性病房護理師為受試者，利用HRV(heart rate variability) 紓壓儀監測使用芳香療法後、人工智慧音樂後、人工智慧音樂介入芳香療法，分析壓力指數、心跳，心率變異數據:SDNN、總功

Introduction

According to traditional Chinese medicine, the pericardial meridian is associated with the pain or fullness in the chest, palpitations, depression, restlessness, manic or depressive disorders, nausea or vomiting, hiccup, gastric pain, and distension in the upper abdomen (Bai and Baron, 2001). Since the parasympathetic modulation of both heart and gut is largely mediated by the vagus nerve, and since vagal stimulation of the gut can result in increased peristalsis while the vagal stimulation of the heart can result in decreased heart rate (Guyton and Hall, 1996), it is speculated that to some extent the pericardium meridian might be associated with the autonomic nervous modulation of the subject.

Acupuncture or acupressure at the Neiguan (P6) point, the most frequently used acupoint in the pericardium meridian, has been shown to lessen nausea and vomiting (Dundee *et al.*, 1987, 1988, 1989a and b; Ho *et al.*, 1989; De Aloysio and Penacchioni, 1992; Belluomini *et al.*, 1994; Fan *et al.*, 1997; Harmon *et al.*, 2000). Because nausea and vomiting are also related to autonomic nervous activity (Morrow *et al.*, 1992; Morrow *et al.*, 1999), we speculated that the autonomic nervous activity might be changed when acupuncture at the P6 point was performed.

Heart rate variability analysis is a useful non-invasive method for the assessment of autonomic nervous modulation of heart rate. Some diseases are associated with abnormal vagal modulation, and the restoration of vagal modulation is associated with the improvement

Chatbots in healthcare

Artificial intelligence (AI) in medicine and digital assistance systems such as chatbots will play an increasingly important role in future doctor – patient communication [1-3]. To benefit from the potential of this technical innovation and ensure optimal patient care, future physicians should be equipped with the appropriate skills. Accordingly, a suitable place for the management and adaptation of digital assistance systems must be found in the medical education curriculum.

Chatbots in healthcare

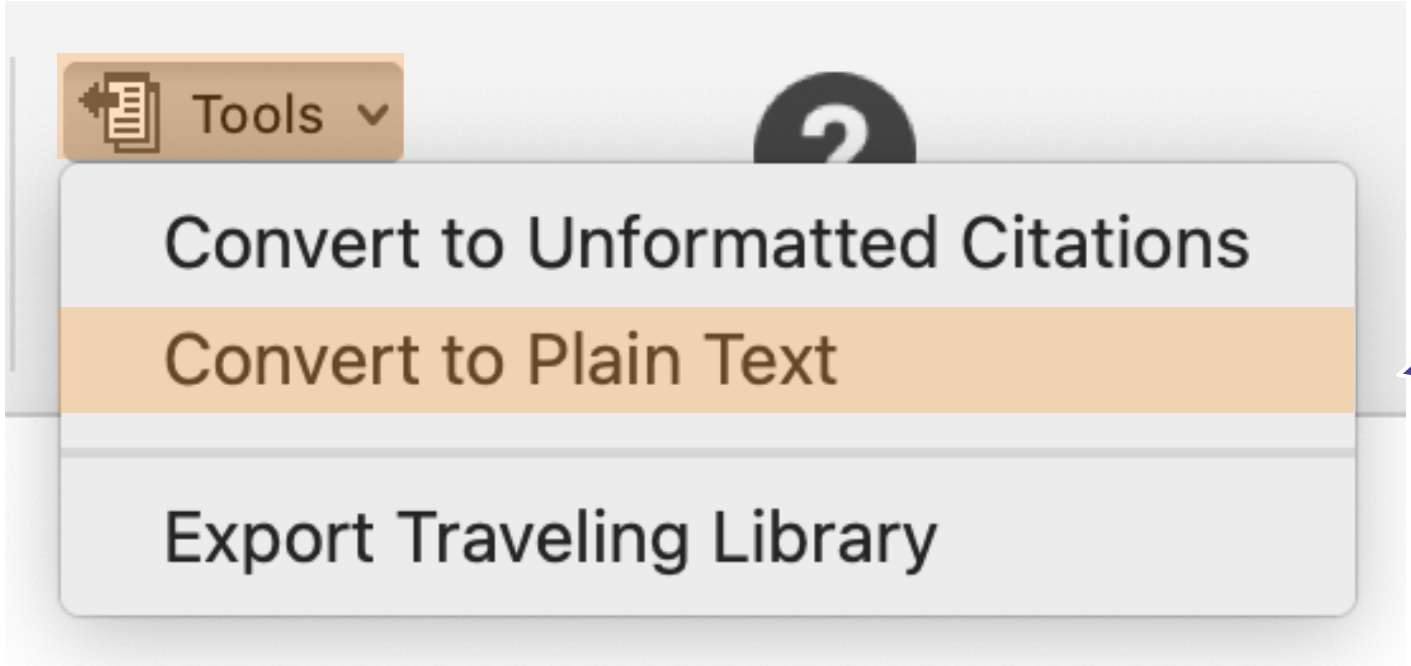
Artificial intelligence (AI) in medicine and digital assistance systems such as chatbots will play an increasingly important role in future doctor – patient communication [1-3]. To benefit from the potential of this technical innovation and ensure optimal patient care, future physicians should be equipped with the appropriate skills. Accordingly, a suitable place for the management and adaptation of digital assistance systems must be found in the medical education curriculum[4,5].

1 Segrelles-Calvo, G., De Granda-Beltrán, A. M. & De Granda-Orive, J. I. Chatbots to stop smoking: is this the future? *Adicciones* **33**, 73-74 (2021).

Word for Mac 移除參數



在 Mac 版的 Word，需從 EndNote 的標籤面版點選 Tools 下的 Covert to Plain Text 以移除參數

備份

建立EndNote Library會產生兩個檔案

夾帶全文或圖片等附檔時會同時建立副本存放於此資料夾

My Endnote Library.Data

存放書目資料及開啟之檔案

My Endnote Library.enl

※ 不要直接在隨身碟操作及上傳至雲端硬碟

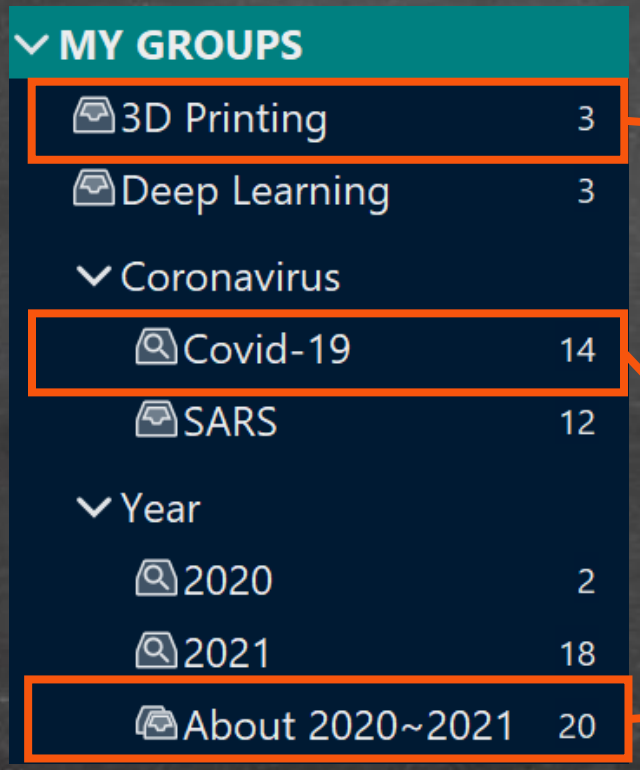
管理書目資料 – Groups

使用者可以透過 EndNote Library 中的 Groups 功能，**分類管理**個人 EndNote Library 中的書目資料。

Groups 的三種型態



Group (一般群組):
使用者自訂分類。

Smart Group (智慧群組):
使用者訂下篩選條件，符合的文獻資料自動進入該群組。

From Groups (集合群組):
利用現用群組進行交集、聯集或是排除而產生的群組分類。
